Movie Review Jurassic World

by Seth

While being helped by four velociraptors, a cool motorbike and two kids he met on the street, Chris Pratt saves over 2000 people from a new threat that came out of the blue. Introducing,...

The Indominus Rex!

A mean, lean, genetically modified dinosaur, killing machine that will kill anything that moves!

Originally made to be the next big hit in Jurassic World, this new asset breaks out of containment and wreaks havoc on the island.

On a thrilling adventure, Chris Pratt tracks down a 50ft tall dinosaur and tries to save the day. I give this film 10/10!!!
